SUBJECT INDEX

Acoustics
acoustic output from stick–slip friction, 79
Aluminium
fretting wear of sintered alumina, 225

Beadblast
surface damage evolution and optical performance of beadblasted fused silica, 187
Bearings
the incompressible lubrication of a ridged foil bearing, 247
Brake squeal
experimental and theoretical investigations of brake squeal with disc brakes installed in rail vehicles, 131

Cast irons
comparison of the sliding wear process of various cast irons in the laser-surface-melted and as-cast forms, 233
erosion behavior of high Si bainitic structures I: Austempered ductile cast iron, 267
Cavitation
comparison of erosion mechanisms in different types of cavitation, 305
Contacts
contact width and compliance between cylinders and rough plates, 353
the crack growth rate in rolling contact fatigue process is very fast, 291
mathematical models of friction for contact problems in elasticity, 61
Contaminants
the influence of contaminants on metallic friction, 21
Copper
comments on "The wear of Cu in single-pass sliding", 295
Crack growth
the crack growth rate in rolling contact fatigue process is very fast, 291

Damage
surface damage evolution and optical performance of beadblasted fused silica, 187
Disc brakes
experimental and theoretical investigations of brake squeal with disc brakes installed in rail vehicles, 131

Elastomers
mechanics of sliding friction of elastomers, 37
Erosion
comparison of erosion mechanisms in different types of cavitation, 305
erosion behavior of high Si bainitic structures I: Austempered ductile cast iron, 267
erosion behavior of high Si bainitic structures II: High Si steels, 279

Fatigue
the crack growth rate in rolling contact fatigue process is very fast, 291
Films
the relationship between oxide films and the wear of steels, 203
Fretting
fretting wear of sintered alumina, 225
Friction
acoustic output from stick–slip friction, 79
friction between metal surfaces, 3
friction and the bowed string, 175
friction and stick–slip in a telescope construction, 17
the influence of contaminants on metallic friction, 21
mathematical models of friction for contact problems in elasticity, 61
mechanics of sliding friction of elastomers, 37
solid state physics of friction, 87

Iron
the unlubricated wear of Fe, 383
the unlubricated wear of sintered Fe, 371

Laser
comparison of the sliding wear process of various cast irons in the laser-surface-melted and as-cast forms, 233
Lubrication
the incompressible lubrication of a ridged foil bearing, 247

Metals
friction between metal surfaces, 3

Noise
the significance of rolling noise in the ISO/R 362 test procedure, 151
tyre noise generation, 157
wheel–rail noise generation, 143

Optical performance
surface damage evolution and optical performance of beadblasted fused silica, 187
Oxygen
the relationship between oxide films and the wear of steels, 203

Plastic deformation
plastic deformations of wheel–rail surfaces, 123
Ψ splitting
unusual arrangement of the inclinations of lattice planes and Ψ splitting, 323

Rails
plastic deformations of wheel–rail surfaces, 123
wear of wheel–rail surfaces, 103
wheel–rail noise generation, 143
Railways
experimental and theoretical investigations of brake squeal with disc brakes installed in rail vehicles, 131
Rolling
the crack growth rate in rolling contact fatique process is very fast, 291
the significance of rolling noise in the ISO/R 362 test procedure, 151
Rolling contacts
the crack growth rate in rolling contact fatigue process is very fast, 291
Rolling noise
the significance of rolling noise in the ISO/R 362 test procedure, 151

Silicon
erosion behavior of high Si bainitic structures I: Austempered ductile cast iron, 267
erosion behavior of high Si bainitic structures II: High Si steels, 279
surface damage evolution and optical performance of beadblasted fused silica, 187
Sliding
comments on "The wear of Cu in single-pass sliding", 295
comparison of the sliding wear process of various cast irons in the laser-surface-melted and as-cast forms, 233
mechanics of sliding friction of elastomers, 37
unsteady motions between sliding surfaces, 83
Solid state physics
solid state physics of friction, 87
Steel
erosion behavior of high Si bainitic structures II: High Si steels, 279
the relationship between oxide films and the wear of steels, 203
Stick–slip
acoustic output from stick–slip friction, 79
friction and stick–slip in a telescope construction, 17
Strings
friction and the bowed string, 175
Surfaces
comparison of the sliding wear process of various cast irons in the laser-surface-melted and as-cast forms, 233
surface damage evolution and optical performance of beadblasted fused silica, 187

Telescope
friction and stick–slip in a telescope construction, 17
Tyre noise
tyre noise generation, 157
Tyres
tyre noise generation, 157

Wear
comments on "The wear of Cu in single-pass sliding", 295
comparison of the sliding wear process of various cast irons in the laser-surface-melted and as-cast forms, 233
fretting wear of sintered alumina, 225
the progressive wear of tubes: the volumes of the intersections of cylinders with each other and with flats, 331
the relationship between oxide films and the wear of steels, 203
the unlubricated wear of Fe, 383
the unlubricated wear of sintered Fe, 371
wear of wheel–rail surfaces, 103
Wheels
plastic deformations of wheel–rail surfaces, 123
wear of wheel–rail surfaces, 103
wheel–rail noise generation, 143
